

PRODUCT NAME:

CLIMAX 2.5M RETRACTABLE FALL ARRESTOR

PRODUCT CODE/S:

CLX2013

OVERVIEW:

The Climax CLX2013 Retractable Fall Arrestor is a high-performance personal fall-protection device built for use in work-at-height and access-demanding environments. With a 2.5 metre retractable lifeline, robust housing, and built-in energy absorption system, the unit is engineered to arrest falls quickly and safely, keeping the user's fall distance minimal and shock forces low.

Its automatic inertial braking allows free movement within the connected working area while ensuring immediate lock-up in the event of a fall. The device features durable construction with ABS housing, high-strength connectors, and a wide webbing or cable line designed to withstand the stresses of arresting a fall. Certified to relevant European standards (such as EN 360:2002) and suitable for vertical or inclined use when properly anchored. Ideal for roof work, scaffolding, confined spaces, maintenance at height, and industrial access tasks.

DETAILS:

Key Features:

- 2.5 m retractable lifeline
- Automatic locking mechanism during a fall
- Compact and lightweight design for easy handling
- High strength casing and webbing
- Suitable for industrial and construction applications

How to Use:

- Inspect the arrestor, carabiners, and webbing before use.
- Attach the device to an approved anchorage point above the user.
- Connect the lifeline hook to the harness D-ring.
- Move freely while ensuring the line remains unobstructed.
- After use, retract fully, inspect, and store properly.
